DETAILED ACTION

Response to Amendment

Applicant's amendment filed September 7, 2004 has been thoroughly reviewed and considered by the examiner. In view of applicant's amendment, the prior double patenting rejection of the claims is hereby withdrawn.

Claim Objections

It is noted that claim 36 is dependent upon a cancelled claim 12.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 26-36 are rejected under the judicially created doctrine of double patenting over claims 1-8 and 12-23 of U. S. Patent No. 6,619,308 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

Art Unit: 3753

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: A variable pressure regulator comprising a valve body having a fluid inlet, fluid outlet, a fluid pressure-sensing chamber, a resilient member comprising a wall section forming a wall of the chamber and a valve stem connected to the wall section, a valve element supported on the valve stem, an adjuster comprising an adjuster member and a cover, and a detent mechanism defining a plurality of angular positions relative to the valve body.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
